FLEX-I-WEB GEARS

WITH A TAPE-WOUND WEB

•A NEW form of web made by winding tape has provided in the Flex-I-Web gear new and valuable qualities.

The web is stronger. It vibrates at a different frequency than the surrounding parts and damps down front-end noise.

This new form of non-metallic gear carries a step further the development of a camshaft drive which, because of simplicity, light weight, and long life, is increasingly popular.

AUTOMOTIVE INDUSTRIES

Vol. 72, No. 8 ▫ THIRTY-SEVENTH YEAR ▫ February 23, 1935

A Great Industry—A Major Factor In National Recovery

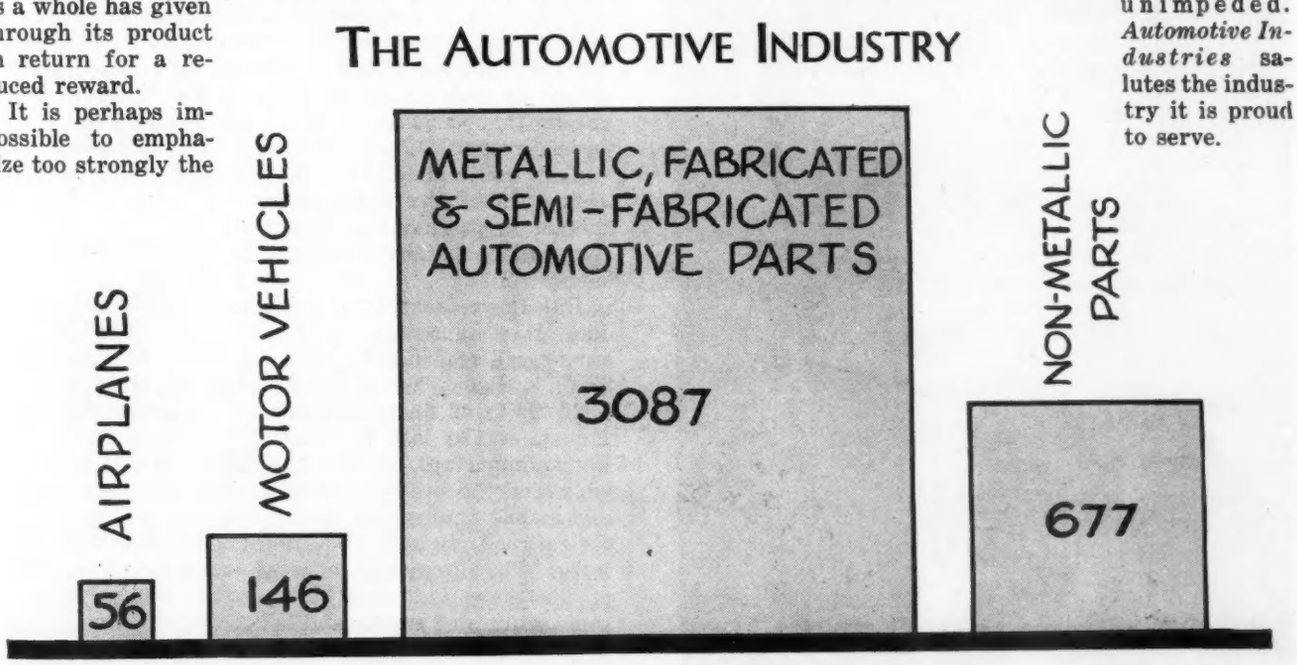
By Julian Chase

NO group in the whole of industrial America has made a greater contribution to the restoration of national prosperity than have the automotive manufacturers. They have earned direct credit for material accomplishment measured in increased employment and extended buying power. They have provided leadership, truly inspiring, by their concrete manifestations of resourcefulness, aggressiveness and courage. All America has benefited by the example they have set. All America has profited by the things that they have done.

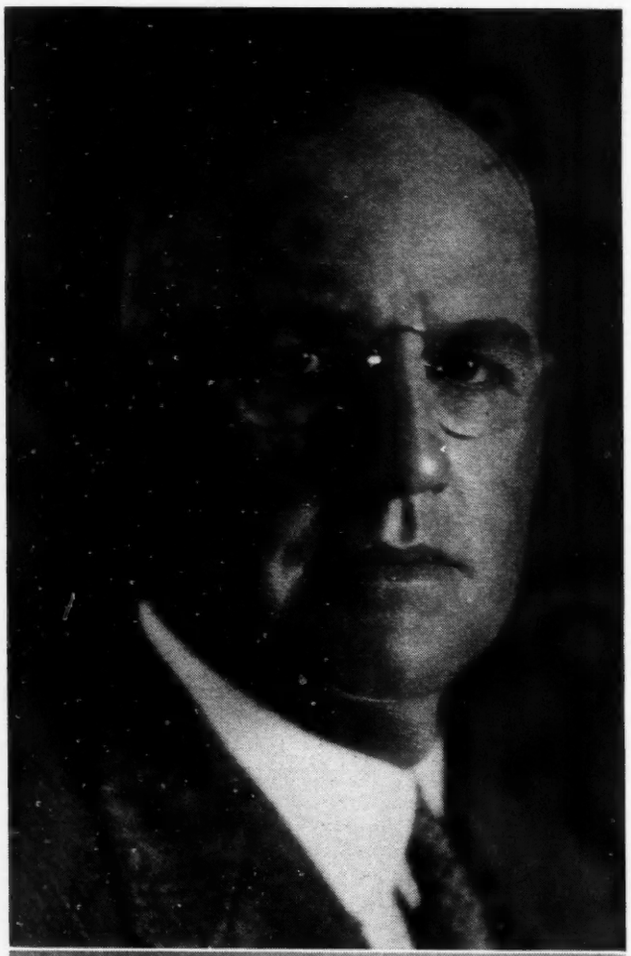
In this, the Seventeenth Annual Statistical Issue of *Automotive Industries*, are to be found factual proofs of the industry's progress—statistics, specifications, comparative data. They show the gains that have been made in spite of unprecedented restriction and hindrance, under conditions of inordinate discouragement. They do not show, naturally, so obviously as the truth deserves, the benefits to our entire social-economic system which have resulted from these gains and from the greater value in service to mankind which the industry as a whole has given through its product in return for a reduced reward.

It is perhaps impossible to emphasize too strongly the importance to our national well-being of the automotive industry with its output, in a year no better than that just passed, running to a wholesale value of approximately two and a quarter billion dollars. On that output excise taxes alone amounting to some sixty-nine million dollars were paid into the national treasury. But that is only the beginning of the story. Besides the four thousand of complete vehicle, parts, accessory, maintenance equipment and other manufacturing companies which make up the industry itself, hundreds of allied but separate and complete industries, even more than normally, in times like these, depend for their opportunity to give and extend employment, upon the manufacture and the sale of automobiles. Thousands of dealers and more thousands of service men with their still more thousands of salesmen and mechanics get from the new car output and the cars in service the means to buy their bread and pay their rent and taxes.

For the welfare of all, for a continuation of the aid and initiative which it has supplied to industry generally, may the progress of the automotive industry be unimpeded. *Automotive Industries* salutes the industry it is proud to serve.



The plants which turn out cars, trucks, buses, tractors and airplanes are but the nucleus of the gigantic organism which is the automotive industry. Besides the manufacturers included in the chart above, there are many more who furnish to the industry raw material, plant equipment and supplies in almost endless variety. Upon the welfare of the automotive industry, the welfare of a substantial portion of all industrial America depends.



Productivity Makes Employment

By Alvan Macauley
President, Automobile Manufacturers' Association;
President, Packard Motor Car Company

WHEN American business can operate profitably the country is going to be more prosperous. These two most desirable elements in business, profits and prosperity, are wedded together by fixed economic laws. There are indications that many barriers to profitable operation of the country's business have been lowered—or are lowering. If this is true it is a distinct note of encouragement as we face a new year.

Productivity in business—all business—increases with profitable operation and business productivity is what this country now needs to put its people back happily at work. It's an all important cycle. Greater productivity gives greater employment and greater employment creates the need for greater productivity. It's to be hoped that no added barrier to profitable operations will be erected in 1935 and that those which may now exist will be leveled.

Certainly, great efforts were made by the automotive industry during 1934 to spur the country's business. They were well directed efforts and had they not been made it is easy to believe 1934 might have dealt less kindly to all business than it did. The spending of millions of dollars by the industry is concrete evidence that courage is not lacking on its part at this time. Efforts are being redoubled.

More Cars—Greater Prosperity

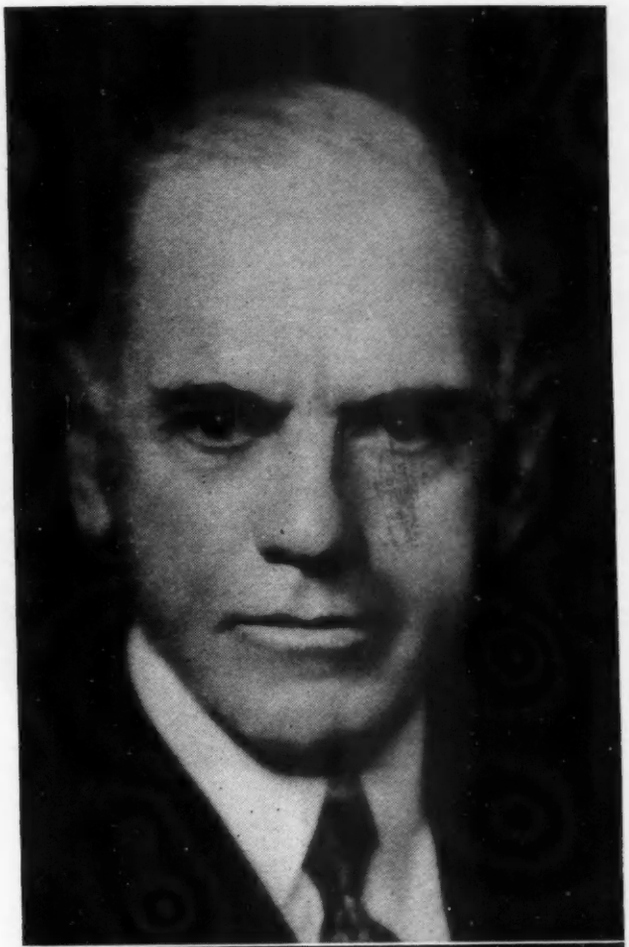
By Roy D. Chapin
Former Secretary of Commerce;
President, Hudson Motor Car Co.

WE are all familiar with statistics showing the really incredible proportion of our population whose livelihood comes, either directly or indirectly, from the automobile industry. This total in itself means that the prosperity of our people and country is in direct relation to the volume of automobile sales —they rise and fall together. Happily they are now rising. The increased buying power provided by automobile wages and commissions is a major factor—unquestionably the greatest—in our successful economic effort.

But there is another point that is of importance, too. It is agreed that a final, soundly-founded prosperity will return only when the heavy industries are again active. The various problems involved, particularly those of financing, necessarily make the heavy industries the last to climb from inactivity. It is highly important, though, that the type of production on which the heavy industries depend be kept active and mobile against the time when they will be needed for railroad, highway, building and other construction work. The automobile industry (actually a first cousin of the heavy industries) fortunately depends on the same sources of supply and is keeping them active and in position to meet the further needs that appear to be not far off.

Automobiles and Steel

By Eugene G. Grace
President, American Iron & Steel Institute;
President, Bethlehem Steel Co.



IN the complex structure of modern industrial civilization, the well-being of one business is closely interrelated with the prosperity of the whole.

In two particulars the advancement of the automobile business has a healthy effect upon the steel industry. The first is obviously in the field of general employment. The steel industry has a normal payroll force of somewhere around 420,000. Activity in the automobile market creates immediately a sizable demand for sheets, alloys, bars and other materials. This is reflected in the pay envelope of the steel worker. Especially in recent years when the men have experienced so much short-time employment this influence is immediately noticeable and gratifying.

There is another factor which has received less attention. The emphasis by the automobile industry on improved steels, accentuating lightness and strength, has been a stimulus to the brain-workers in the steel plants, such as the metallurgists and engineers. This stimulus has been not only in the line of employment but also it has been an inspiration to creative achievement. In adding impetus to scientific advance the automobile industry is contributing to our general economic future, for these developments in motor factory and steel plant become a permanent addition to our storehouse of scientific knowledge.

Contributing to American Progress

By Walter P. Chrysler
Chairman of the Board, Chrysler Corporation

ONE of the fundamental reasons for the automotive industry's continuing contribution to American progress is its constant effort to improve the automobile itself and thus increase its usefulness. All through the depression, for example, we have not hesitated to invest large sums of money in engineering research and in improving production facilities with a view to bettering design, quality and performance of the car and yet fit it to the pocketbooks of potential purchasers under prevailing economic conditions.

A most significant business indication at any time is the demand for automobiles. Today this index shows unmistakably either a greater buying power on the part of the public or a greater willingness to buy. Perhaps it is both. The fact is that the automobile industry has the largest number of orders on hand since 1929 and is in a better position to fill them promptly.

In its persistent search for a better product, for new and better ways of doing things, looking toward more economical production and operation of automobiles, the motor car industry has greatly stimulated technical development in other complementary industries. The result is that automobile manufacture is not only prepared for business revival, but gives most promise of contributing substantially toward bringing it about.

A Continuous Producer of Wealth

By Henry T. Ewald

President, Campbell-Ewald Company

EVERY motor car that leaves the factory represents money paid for wages and salaries to those who produced it; money paid to a small army of parts and equipment makers scattered throughout the country; money paid to steel, iron and aluminum mills, to lumber mills, to glass and textile mills, to paint and varnish manufacturers and to tire makers.

It is a source of profit to thousands of distributors, dealers and salesmen scattered in every city, town and hamlet in the country.

Once it leaves the salesroom it becomes a five to seven, or even ten years, source of revenue to untold thousands of oil and gas producers, oil and gas distributors, service stations and garages, replacement parts makers, tire manufacturers and many others who contribute to its operation and upkeep.

Probably no other industry contributes to the welfare of so large a proportion of the people, or is so far reaching in its effect upon the prosperity of the nation. Continued increase in motor car production inevitably means a continued upward trend in general business conditions.

This Work Must Go On

By Charles B. Bohn

President, Bohn Aluminum and Brass Corporation

WE are not standing still in the automobile industry. Year by year we are offering the public better cars for less money. This does not necessarily mean that prices will continue to drop but it does mean that the quality of the product per dollar expended will continue to increase. In this betterment of the product many hundreds of parts and material manufacturers will wield a vast and growing influence.

The future business of the automobile industry will be vitally affected by the research work which is being conducted in the laboratories of the parts makers today. A tremendous percentage of the pioneering and experimental work which will determine the major improvements in the coming automobile, is being sponsored by the parts and material manufacturers with the cooperation of the car engineers.

These technical developments are proceeding at a rapid pace. We can definitely state that they will soon obsolete the present type of car. The car of tomorrow will be so much better than anything now available that the greater desirability of the product will be a powerful stimulation to buying, to increased production and, hence, to increased employment.

For the good of everyone this work must go on. It should be given every opportunity to go on in order that it may reach its fullest potentialities as a factor in economic progress, as a contributor to the restoration of national prosperity.

Traffic Control Will Aid Recovery

By Paul G. Hoffman

President, The Studebaker Sales Corp. of America

THE motor vehicle has created a new type of society. Its benefits can be still further enlarged by effective guiding rather than by retributive restriction of its operation.

Control of automobile traffic to prevent accidents and to insure development of maximum economic and social values from automobile use is essential to full business recovery.

Both of these objectives must be achieved if the interests of the whole public are best to be served.

To gain general observance, traffic regulation must permit the fullest possible use of the modern motor vehicle. To safeguard people from accidents, the highway and street conditions surrounding vehicle operation must be studied with that thought in mind. More attention must be concentrated on positive moves for betterment of traffic conditions and less on merely punitive measures taking effect after accidents have happened.

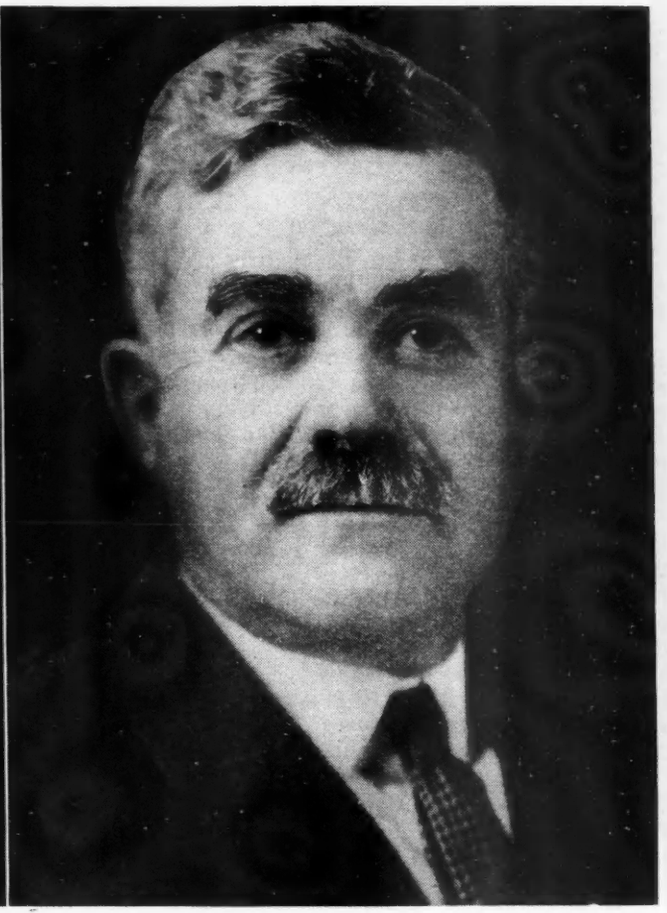
Automobile manufacturers in the future should take a far more active part in practical efforts to achieve these ends than they have thus far. They are face to face with an opportunity as well as an obligation.

Aid in the Forward March

By Mason T. Rogers

President, Motor and Equipment Manufacturers Association; Vice-President, Multibestos Co.

I BELIEVE that history will repeat itself and that the automobile industry will continue to lead the march to industrial recovery. I believe that research —the perfecting of new ideas—will be largely responsible for this development. But with the production and sale of over three million vehicles in 1935 (and all that that means in stimulating other industries supplying the automotive) goes the need for adequate servicing of those and the other twenty-two million vehicles operating on the highways. It is the responsibility of the men connected with the aftermarket activities to keep pace with the research men at the factories to the end that the most modern servicing equipment may be made available and essential service material may reach the ultimate consumer with the least amount of effort and at the lowest possible cost. The solution of these problems will do much to increase the use of automobiles and thus aid in the forward march.



Fundamental Forces for Recovery

By H. L. Horning

President, Waukesha Motor Co.

IN the last few months I have personally viewed recovery in Sweden and England, and looking back at the United States from that standpoint and somewhat objectively, the following is my analysis of our economic situation for 1935 and 1936:

The sum of individual effort and courage properly directed, carrying on against all odds, depending on faith rather than certainty in making one desperate try after another, has defeated other depressions. These are the sustaining forces on which our hopes are staked, and they are prevailing against every discouraging obstacle Washington is throwing in the way of business and industry.

Our true economic trend is in the hands of every man, and, while it can be harassed, hindered, aided, and abetted to some extent by politics, it cannot be dominated or stopped by a political party or a President. This is our supreme assurance. A bit of European satire is: "Wouldn't it be too bad if the depression came to an end before the experts found a cure for it."

Markets will dip, industries will stagger, and discouragement will hold back orders, but recovery will march steadily on.

New Motor Equipment Needed

By A. J. Brosseau

Vice-President, Automobile Manufacturers' Association; President, Mack Trucks, Inc.

FROM current sales of gasoline for motor vehicle use it is quite evident that existing equipment is being overworked and that the necessity for replacements, as yet, has been given scant attention.

It is of greatest importance that this second rate keep pace with the first, if we are to preserve proper balance in the economics of highway transportation and help to restore general prosperity.

For the promotion of general safety, the operator of high-grade equipment, which is now over ten years old, owes it to himself and his neighbor either to bring this old equipment up to modern safety standards, or replace it with new equipment.

AUTOMOTIVE INDUSTRIES acknowledges with gratitude the generous cooperation of the statisticians of the industry, here and abroad and of the motor vehicle departments of the various states in the preparation of material for this issue. The statistics and specifications were compiled under the supervision of Marcus Ainsworth, Chilton staff statistician.

Buying Power from Shop Equipment

By W. C. Allen
Chairman, Shop Equipment Associates;
Sales Manager, Brunner Mfg. Co.

INCREASED activity in automobile manufacturing has been accompanied by a greater demand for maintenance work which, in turn, has revived interest in and demand for profit producing shop equipment.

Shop equipment—a term generally understood to mean all types of service and maintenance equipment other than hand tools—turned the corner with the rest of the automotive industry in 1934. The best proof of this improvement comes from the increased activity among automotive wholesalers and distributors who once again are looking at their equipment lines as sales and profit producers.

Many thousands of workers are engaged in the manufacture of automotive service and maintenance equipment. More thousands are dependent upon such products for profits in their daily work. The welfare of these many thousands of wage earners, jobbers, dealers and shop owners is intimately related to and dependent on the continued progress of the automotive industry as a whole toward the production volume needed to meet the pent-up demand for essential motor transportation.

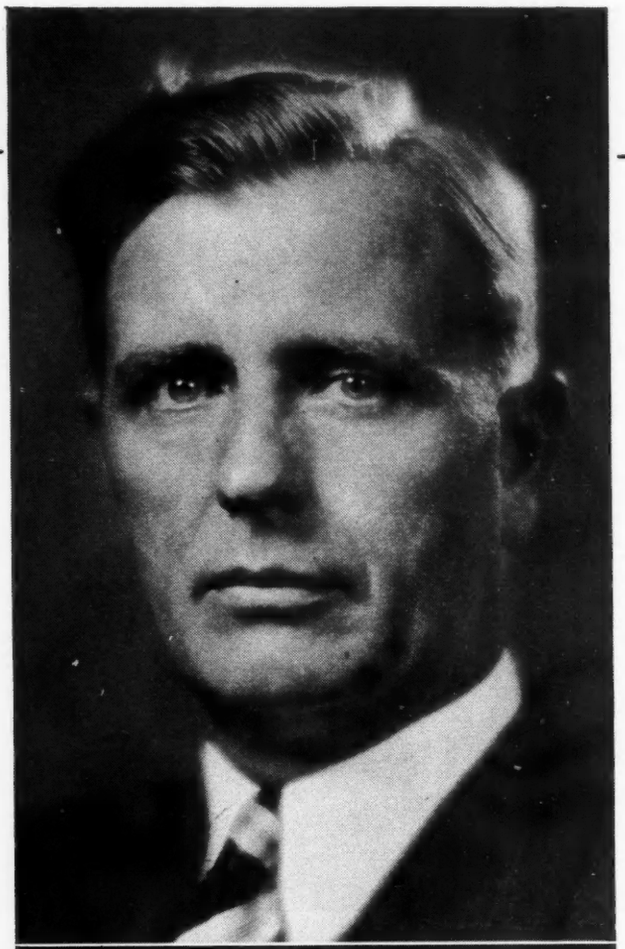
A Network of Veins Through Industry

By Royce G. Martin
President, Electric Auto-Lite Co.

INDUSTRY, in general, is heartened by the upturn in motor car production and the optimistic predictions of motor manufacturers regarding 1935 production programs.

In 1922, the automobile led the way to renewed prosperity and there is a very general feeling that this may be the case in 1935, coupled, of course, with reasonable upturn in construction and other capital goods industries. The increased schedules for the car manufacturers spread like a network of veins throughout the entire industrial structure of America. Steel operations have stepped up rapidly recently for which motor car releases have been largely responsible. Our own business has shown the largest volume since 1930.

This increase means increased production for hundreds of other companies who supply us with raw material and that business means releases from them to other hundreds of suppliers of material, so that the billion-and-one-quarter dollar volume of the motor car companies becomes several billions to American industry, a very large part of which is again spent with manufacturers of consumer goods, resulting in an accumulation of business that is more impressive by far than any expenditure by the Federal Government, no matter how big, within reason, it may be.



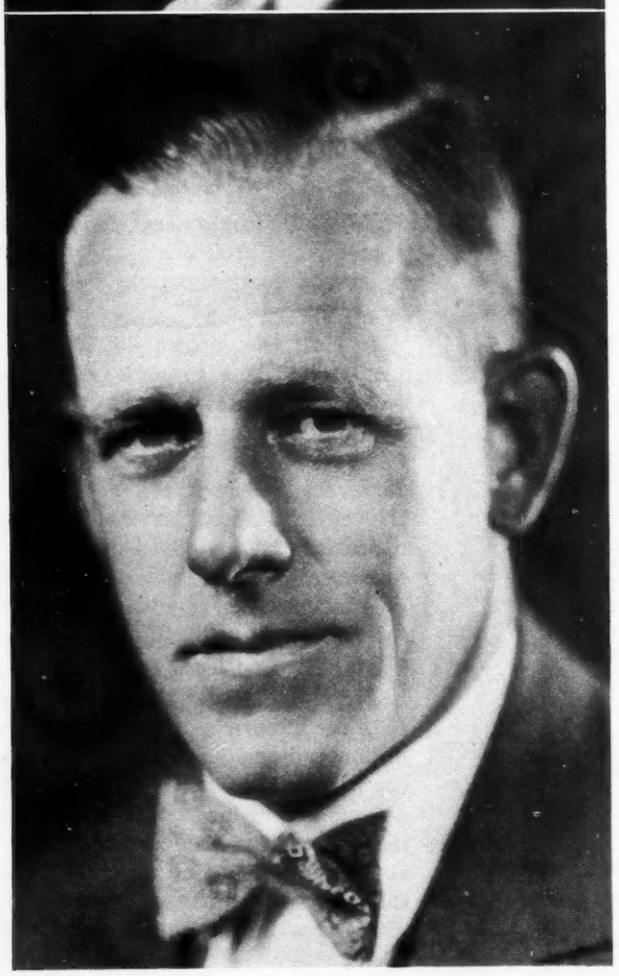
Recovery Potentialities In Parts Industry

By F. S. Kimmerling

President, AC Spark Plug Co.

THE size of the industry which is devoted to the development of specialized parts for the automobile manufacturer and for the maintenance of the country's 24,000,000 cars and trucks in service is generally not fully appreciated. The annual volume of this group of manufacturers is in excess of one billion dollars.

It is estimated that if the cars now on the roads went into service shops for needed repairs and adjustments, it would require parts, tool and equipment makers two years of 24 hour days to supply service men the tools and parts they need. It would take these men an equal length of time to do the work.



Automotive Activity Spreads Confidence

By Sandford Brown

Vice-President, Bakelite Corp.

I HAVE been impressed during the past month on an extensive trip through the Middle West by the encouragement which has been imparted to manufacturers in allied and even remotely related lines by the sales aggressiveness and production performance of the manufacturers in the automotive industry. In talks with many manufacturing executives, the extent to which the accomplishments of the automotive manufacturers have stimulated them was evident. I am confident that if the predictions of the automotive leaders are realized during this year it will have a most salutary effect upon all industry.

[1] Fiscal year ending Nov. 30.
[2] Six-month period only in 1934 due to change in fiscal year.
— = Decrease.

NOTE—In the above tabulations *Automotive Industries* has endeavored to obtain the actual number of motor vehicles that had been in use during 1934. Duplications have been eliminated wherever possible. Tax-exempt or official cars or trucks have been segregated for 1933, but for 1934 are in many cases included with registered motor vehicles.

1934 Registrations by Countries

By special arrangement with El Automovil Americano and The American Automobile (Overseas Edition)

ABBREVIATIONS

°—Others also
*—Series 10-128" Wheelbase
2D—Two Downdraft
2U—Two Single Updraft
AC—Full Automatic-Centrifugal
AV—Full Automatic, Vacuum
ACV—Full Automatic, Centrifugal, Vacuum
Al—Aluminum
Als—Aluminum with Struts
Au—Automatic
be—Belt
BBS—Babitt Lined Bronze Insert, Separate
BP—Babbitt, Poured
BS—Babbitt, Spun Bearing
BSB—Steel Backed Babbitt, Separate
CA—Cast Iron or Aluminum
ch—Chain
ChI—Chrome Nickel Iron—Tinplated
CI—Cast Iron
CLS—Copper-Lead Alloy, Separate
DD—Dual Downdraft
DM—Direct Mechanical
DU—Dual Updraft
Flo—Floating
G—Gravity
ge—Gears
H—Horizontal
I—In Head
In—Inertia
L—At Side (L-Head)
LSB—Lead Bronze—Steel Back, Separate
MP—Mechanical Pump
N—No or None
O—Own
Oh—Overhead Camshaft (In Head Valves)
Or—Over Running Clutch (Starter Drive)
P—Piston
R—Rubber Rear
R—Rod (Pin Locked In)
RFR—Rubber Front and Rear
Rig—Rigid
SA—Semi-Automatic

TRUCK SPECIFICATIONS TABLE

KEY TO ABBREVIATIONS AND REFERENCE MARKS

GENERAL

Chassis Price — Chassis price quoted applies to the standard wheelbase and specifications listed. All prices are F.O.B. factory.
***—List price not yet established.
Tonnage Rating — Where a spread of ratings is given the maximum ratings are for ideal operating conditions and the minimum for extremely difficult conditions; the ranges between are for varying operating conditions.
Gross Vehicle Weight — Is chassis weight, plus body and cab, plus payload. Gross vehicle weight given for a model is based on maximum recommended tire size and not on tires listed as standard equipment.
Chassis Weight Stripped — Includes gas, oil and water and all things included in chassis price. Does not include the weight of cab.
Maximum Brake H. P. at Given R.P.M.—Is actual dynamometer reading without accessories.
Tractors—Unless given the designation N (meaning not available as tractor), all standard models may be assumed to be available as tractors.
(A) All Torque and Brake Horsepower values listed are based on engine outputs with all Standard Equipment Accessories running and are the same values obtaining with the truck on the road in actual operation.
(N) Not available as tractor.
(T) This designation accompanying a model number indicates vehicle is specifically designed for tractor use only.
c. o. e.—Cab-over-engine design.
(3) Corbitt—Larger engines and corresponding auxiliary units provided on all models at extra cost.
(4) Day Elder—Model 75—1½ ton—same specifications except price—$945, and larger tire size—B6.00/20 front and DB6.00/20 rear.
(5) Dodge — F-61 available as special tractor truck with 146-inch wheelbase with model designation of F-60, at $2,645. K-61 available as special tractor truck with 146-inch wheelbase with model designation of K-60, at ***.
(5a) Dodge — Model H20, ¾-1 ton, gross vehicle weight 6,000 lb., price $502, has same specifications as H30 except tires which are 7.50/17 and lighter rear springs.
(6) General Motors — Models **T-18 to T-61 inclusive** are also available for export only as coach chassis. Dual performance axle at extra cost in Model T-18. Double reduction axles optional at extra cost in Models T-43, T-46, T-46H, T-51, T-73H and T-74. Worm type axles optional at price deduction in Models T-61, T-75T, T-75, T-75H and T-83. Chassis prices and weights on all cab-over-engine models include the cab. A complete line of superheavy duty models designated T-85 series (4-wheel) and T-95 series (6-wheel) custom-built to exactly meet customer's requirements are available with a range of axles, wheelbases, engines, transmissions, etc., and prices will be quoted upon application.
Gramm—Larger engines and corresponding auxiliary units provided on all models at extra cost when type of service demands. Wheelbases and body mounting dimensions may change to suit special requirements. Double reduction axles available on all models except AX and BX.
Gross weight indicated for each model in the table is the straight rating.
Series CXH is supplied with Hercules JXB engine in Model CXHB and Hercules JXC in Model CXHC.
(7) Grass Premier—Eight cylinder engines available on following models: 835 with Lyc. GU at $1,515 list; 865 with Lyc. HF at $4,230; 875 with Lyc. AE at $5,400.
(8) International Harvester—A-1, ¾ ton, same as A-2 except less spring leaves and smaller tires.
(9) Le Moon—Model 600 available with Lyc. AEC at same cost. Models 701 and 801 available with Waukesha 6SRL at same cost.
(10) Sterling—Rocker arm used in place of springs.
(D) Sterling—Diesel Equipped.
†Reo — Model 1D is the longer wheelbase edition of Model 1B. The frame dimension is 7x2¾x3/16. It is furnished at extra cost.
††Reo—2J, 2K same as 2H except 166 in. wheelbase and price of $1,695.
††Reo — 3J same as 3H except wheelbase of 170 in. and price of $2,085; 3K same as 3H except 185 in. wheelbase and price of $2,155. 3M same as 3H except 205 in. wheelbase.
(11) Studebaker — S-2 in 141 in. and 165 in. wheelbases has 6 15/16 in. frame depth.
(12) White—Each model shown is furnished with different specifications for different tonnage ratings.
*—Factory governed speed 2400 r.p.m.
(12a) White—Special prices for each installation.
(13) Marmon-Herrington—Available with Hercules Diesel engine. Price on application.
(14) Ford—Rear axle ratios 5.14 and 6.6 optional on 1½-ton trucks.
(15) Mack — Chassis price and weight include cab.
(16) Biederman—Will furnish Continental, Hercules, Waukesha and Lycoming engines at the buyer's option.
(17) Moreland — All Moreland models available with Waukesha engines and as six-wheelers with dead axle.
(18) Walker—Frame lengths may be changed, within limits, to suit individual requirements, at no additional cost.
(19) Available—Models WS125, WS240 and WS300 are available as cab-over-engine types.

MAKES—ALL

AB—American Bosch.
A LaF—American La France.
AL—Auto Lite.
B—Bendix.
BB—Borg & Beck.
BL—Brown-Lipe.
BO—Bendix front, Own rear.
Blo—Blood.
Bu or Bud—Buda.
BW—Borg Warner.
BWs—Bendix front, Westinghouse rear.

Li—Lipe, W. C.
LN—Leece Neville.
Lo—Long.
LO—Lockheed front, Own rear.
LW—Lockheed front, Wisconsin rear.
Lyc—Lycoming.
Mc—McCord.
Ma—Marvel.
ME—Merchant & Evans.
MM—Mechanics Mach.
Mo—Modine (radiator).
Mo—Monarch (governor).
My—Mallory.
NE—North East.
No—Not supplied.
ns—No Standard.
O or Ow—Own.
Op or Opt—Optional.
Pe—Pierce (governor).
Pe—Perfex (radiator).
PS—Peters & Snead.
RB—Robt. Bosch.
Ro—Rockford.
Ros—Ross.
Sc—Scintilla.
Sch—Wheeler-Schebler.
Shu—Shuler.
SpB—Spicer and Blood.
Spi—Spicer.
Ste or St—Sterling.
Sto.-Bat.—Storage Battery.
Str—Stromberg.
Til—Tillotson.
Ti—Timken.
TWH—Timken Wisconsin Herrington.
WG—Warner Gear.
Wa—Waukesha (governor).
Wau—Waukesha.
W or Wis—Wisconsin.
Ws—Westinghouse.
Yo—Young.
Zen—Zenith.

BRAKES—SERVICE

Location

2—Two Wheels, rear only.
2/4—Two-wheel brakes effective on all four wheels through driveshaft.
4/6—Brakes on four rear wheels effective on all wheels through driveshaft.
T/4—Brake on transmission effective on all four wheels through driveshaft.
4—Four Wheels, front and rear.
4r—Four Wheels, rear only.
6—Six Wheels, front and rear.
J—Jackshaft.
P—Propeller shaft.

Type

I—Internal.
X—External.

OPERATION

A—Air.
D—Hydraulic and mechanical.
H—Hydraulic.
M—Mechanical.
V—Vacuum.

BRAKES—HAND

Location

C—Center of double propeller shaft.
2—Rear wheels.
4—Four wheels.
R—Worm or bevel gearshaft.
T—Transmission.
F—Driveshaft.

Type

D—Tru-Stop disk.
I—Internal.
X—External.

BRAKE DRUMS

Material

a—Cast alloy iron.
A—American Car Fdry.
C—Centrifuse.
D—Dayton.
E—Ermalite.
G—Gunite.
H—Hunt Spiller.
c—Cast Iron.
p—Pressed steel.
s—Cast steel.
(Where a combination of any of the above is used, the first reference mark applies to the front and the second to the rear drums.)

CLUTCH

Type

D—Multiple disk.
dp—Double plate.
O—Plate in oil.
P—Single plate.

ENGINE

Valve Arrangement

F—Inlet valve in head; exhaust valve at side.
H—In head.
L—"L" head, valves at side.
T—Inlet and exhaust on opposite sides.

Camshaft Drive

C—Chain.
G—Gear.

Piston Material

A—Aluminum alloy.
B—Semi-steel.
C—Cast iron.
N—Nickel iron.
S—Aluminum alloy with strut.

Main Bearings

r—Rear main bearing.

Oiling System

CC—Pressure to main, connecting rod and camshaft bearings.
FP—Pressure to main, connecting rod camshaft bearings and piston pins.
PC—Pressure to mains and connecting rod bearings.
PG—Pump, gravity and splash.
PS—Pressure with splash.

FUEL SYSTEM

Fuel Feed

E—Electric pump.
G—Gravity.
M—Mechanical pump.
P—Pressure.
V—Vacuum.
B—Bosch.
C—Cummins.

REAR AXLE

Final Drive and Type

B—Bevel.
C—Chain.
D—Dead.
F—Full-floating.
2—Double Reduction.
S—Spiral bevel.
W—Worm.
w/2—Worm or Double Reduction Optional.
½—Semi-floating.
¾—Three-quarter floating.

Drive and Torque

A—Radius Rods and Torque Arm.
H—Hotchkiss (springs).
R—Radius Rods.
T—Torque Arm.
U—Torque Tube.

TIRES

B—Balloon.
DB—Dual Balloons.
P—High Pressure Pneumatics.
DP—Dual High Pressure Pneumatics.
S—Solids.
DS—Dual Solids.
°—Pneumatics at extra cost.

TRANSMISSION

Location

A—Amidships.
J—Unit with jackshaft.
U—Unit with engine.

Auxiliary Location

No—Not furnished.
O2—2 speed axle unit optional at extra cost.
Op—Optional at extra cost.
A—Amidships.
R—Rear of amidships main transmission.
U—Unit with engine.

WHEELS DRIVEN

2C—Center pair of rear wheels.
2R—Rear pair of rear wheels.
4F—Front and center pair of rear wheels.
4R—Four rear wheels.
6—Six wheels.

ABBREVIATIONS:

a—Main Bearings.
Accx—Accessories Drive
Air C—Air Cooled
Al—Aluminum Alloy
Als—Aluminum Steel with Strut
AS—Composite Aluminum and Alloy Steel Strut
ASt—Alloy Steel
b—Connecting Rod Bearings
B—Buses
c—Camshaft Bearings
C—Cars
Cam—Camshaft
Car—Carbon Steel
Cent—Centrifugal
ChM—Chrome Molybdenum
ChN—Chrome Nickel Steel
Chr—Chromium Steel
ChNI—Chrome Nickel Iron
ChVa—Chrome Vanadium
CI—Cast Iron
Cran—Crankshaft
d—Wrist Pins
Det—Detachable
Dur—Duralumin
e—(Oiling System)—Timing Gear Case
e—Exhaust
Ecc—Eccentric
f—Rocker Arm
Flo—Floating
Heli—Helical
I—Both valves in head
Ind—Industrial

Int—Integral
Io—Valve in Head; overhead camshaft
L—Valves at side. ("L" head).
Mag—Magnesium
Nich—Nichrome
Nicl—Nickel Iron
NicS—Nickel Steel
NP—No provision
Opt—Optional
Plng—Plunger
PS—Pressed Steel
Pist—Piston
R—Rail Cars
Sep—Separate
Sil—Silichrome Steel
Sl—Sleeve
Spec—Special
SS—Semi Steel
Stk—Standard Equipment
Suct—Suction
T—Trucks
ThS—Thermo-siphon
Tr—Tractors
Tun—Tungsten
Var—Various
*—Optional
°—Others also
†—Inlet valve only
1—Red Wing Motor Co.
2—Super Charged

Int—Integral
Ie—Valve in Head; overhead camshaft
L—Valves at side. ("L" head).
Mag—Magnesium
Nich—Nichrome
Nicl—Nickel Iron

NicS—Nickel Steel
NP—No provision
Opt—Optional
Plng—Plunger
PS—Pressed Steel
Pist—Piston

R—Rail Cars
Sep—Separate
Sil—Silichrome Steel
Sl—Sleeve
Spec—Special
SS—Semi Steel

Stk—Standard Equipment
Suct—Suction
T—Trucks
ThS—Thermo-siphon
Tr—Tractors
Tun—Tungsten

Var—Various
*—Optional
°—Others also
†—Inlet valve only
[1]—Red Wing Motor Co.
[2]—Super Charged

ABBREVIATIONS:

a—Main Bearings.
Accx—Accessories Drive
Air C—Air Cooled
Al—Aluminum Alloy
Als—Aluminum Steel with Strut
AS—Composite Aluminum and Alloy Steel Strut
ASt—Alloy Steel
b—Connecting Rod Bearings
B—Buses
c—Camshaft Bearings
C—Cars
Cam—Camshaft
Car—Carbon Steel
Cent—Centrifugal
ChM—Chrome Molybdenum
ChN—Chrome Nickel Steel
Chr—Chromium Steel
ChNI—Chrome Nickel Iron
ChVa—Chrome Vanadium
CI—Cast Iron
Cran—Crankshaft
d—Wrist Pins
Det—Detachable
Dur—Duralumin
e—(Oiling System)—Timing Gear Case
e—Exhaust
Ecc—Eccentric
f—Rocker Arm
Flo—Floating
Heli—Helical
I—Both valves in head
Ind—Industrial

Int—Integral
Ie—Valve in Head; overhead camshaft
L—Valves at side. ("L" head).
Mag—Magnesium
Nich—Nichrome
Nicl—Nickel Iron
NicS—Nickel Steel
NP—No provision
Opt—Optional
Plng—Plunger
PS—Pressed Steel
Pist—Piston
S—Rail Cars
Rep—Separate
Sil—Silichrome Steel
Sl—Sleeve
Spec—Special
SS—Semi Steel
Stk—Standard Equipment
Suct—Suction
T—Trucks
ThS—Thermo-siphon
Tr—Tractors
Tun—Tungsten
Var—Various
*—Optional
°—Others also
†—Inlet valve only
1—Red Wing Motor Co.
2—Super Charged

ABBREVIATIONS:

a—Main Bearings
Accx—Accessories Drive
Air C—Air Cooled
A-I—Accessories and Idler Drive
Al—Aluminum Alloy
Als—Aluminum Steel with Strut
AS—Composite Aluminum and Alloy Steel Strut
ASt—Alloy Steel
b—Connecting Rod Bearings
Bev—Bevel Gear
B—Buses
Ball—Ball Bearing
c—Camshaft Bearings
C—Cars
Cam—Camshaft
Car—Carbon Steel
Cent—Centrifugal
ChM—Chrome Molybdenum
ChN—Chrome Nickel Steel
Chr—Chromium Steel
ChNI—Chrome Nickel Iron
ChVa—Chrome Vanadium
C&H—Chain and Helical Gear
CI—Cast Iron
CNI—Cast Nickel Iron
Cran—Crankshaft
CS—Cast Steel
d—Wrist Pins
Det—Detachable
Dur—Duralumin
e—(Oiling System) Timing Gear Case
e—Exhaust
Ecc—Eccentric
f—Rocker Arm
Flo—Floating
HI—Horisontal in Head
Heli—Helical
I—Both Valves in Head

ABBREVIATIONS

General
Opt—Optional
Pend—Pending
P.O.A.—Price on Application

Cooling
Liq—Liquid

Arrangement
Hor—Horizontal
IL—In Line
IV-L—Inverted in Line
RAD—Radial

Cylinder Material
1—Aluminum with Cast Iron Liner
2—Aluminum with Steel Liner
3—Cast Iron
4—Cast Iron with Aluminum Head
5—Molybdenum Cast Iron
6—Nickel Iron
7—Nickel Iron and Aluminum with Cast Iron Liner
8—Steel with Aluminum Head
9—Steel
10—Chrome Nickel Steel with Aluminum Head
11—Steel Barrel with Integral Head (Wet Sleeve) Aluminum Jacket

Valve Location
I—In Head with Push Rods and Rocker Arms
L—Valves at Side
OH—Overhead Camshaft

Rating
SL—Sea Level

Propeller Drive
D—Direct
G—Geared

Carburetor Make
Hol—Holley
Str—Stromberg
Zen—Zenith

Ignition Systems Make
Bos—Bosch
Scin—Scintilla

Current Sources
Bat—Battery
Mag—Magneto

Spark Plugs Make
AC—AC Spark Plug
Bos—Bosch
Cha—Champion
BG—BG Corp.
HT—Hurley Townsend

Starter Make
Ecl—Eclipse

Method of Starting
EM—Electric Motor
IN—Inertia
PS—Propeller Swing

Engine Manufacturers
1—International Aircraft Corp.
2—Milwaukee Parts Corp.

For Specifications of Foreign Airplane Engines See Next Page

ABBREVIATIONS:

General

°—Others Also
•—Distance from Engine Plate to Rear of Airscrew Hub
†—Supercharged
‡—Outside Diameter of Cylinders
N—No or None
Op—Optional
SL—Sea Level
Va—Various
Y—Yes

Cylinder Arrangement

H—Four Banks of Four Cylinders Each in H Formation
H6—Four Banks of Six Cylinders Each in H Formation
I—In Line
IV-L—In Line, Inverted
W—Three Banks of Cylinders

Cooling

Liq—Liquid
Wat—Water

Cylinder Material

1—Aluminum with Cast Iron Liner
2—Aluminum Head with Steel Body
3—Cast Iron
4—Cast Iron with Aluminum Head
5—Built up Steel Forging by Welding
6—Steel Barrel, "Y" Alloy Head
7—Steel Forging with Aluminum Heads
8—Steel
9—Cast Iron Head with Steel Barrel

Valve Location

I—In Head with Push Rods and Rocker Arms
OH—Overhead Camshaft
L—L Head (Valves at Side)

Propeller Drive

D—Direct
G—Gear

Carbureter Make

Cla—Claudel
Sol—Solex
Str—Stromberg
Zen—Zenith

Current Sources

Mag—Magneto

Ignition Systems Make

BTH—British Thompson Houston
Bos—Bosch
Duc—Ducellier
Mar—Marelli
Scin—Scintilla
Waf—Watford

Spark Plugs Make

BG—BG Corporation
Bos—Bosch
Gil—Gilardoni
Led—Lodge
Mar—Marelli

Starter Make

BTH—British Thompson Houston
Mar—Marelli
Rot—Rotax

Method of Starting

CA—Compressed Air
Car—Cartridge
EM—Electric Motor
HA—Hand Crank and Compressed Air
HC—Hand Crank from Machine
HE—Hand Crank and Electric Motor
HM—Hand Magneto
PS—Propeller Swing

AUTOMOTIVE DIESEL AND OTHER HEAVY OIL ENGINES

ENGINE MAKE AND MODEL	Designed for	GENERAL: Type	Number of Cylinders—Bore and Stroke	Piston Displacement (Cu. Ins.)	Manufacturers Rated HP. at Specified R.P.M.	Compression Ratio to 1	Compression Pressure (Lbs. per Sq. In. at Specified R.P.M.)	Maximum Pressure (Lbs. per Sq. In.)	B.M.E.P. at Maximum HP. (Lbs. per Sq. In.)	Weight per Rated HP. (Lbs.)	Maximum Torque in Lbs. Ft. at Specified R.P.M.	Engine Weight Complete (Lbs.)	VALVES (4 Cycle): Inlet Port Diameter and Lift (Ins.)	Exhaust Port Diameter and Lift (Ins.)	Inlet Seat Angle (Deg.)	Exhaust Seat Angle (Deg.)	PISTON: Material	Number of Rings per Piston	Length (Ins.)	Weight of Piston with Rings and Pin. (Lbs.)	CONNECTING RODS: Material (S.A.E. No.)	Center to Center Length	Weight with Cap and Bushing (Lbs.)	INJECTION VALVE: Type (Open or Closed)	Orifices (Single or Multiple)	Injection Pressure (Lbs. per Sq. In.)	Specific Fuel Consumption (Lbs. per B.H.P. Hr.)	STARTING EQUIPMENT: Make	Type

ABBREVIATIONS:

1—Also Made in 1, 2, 3, & 4 Cylinders
2—These Engines Range from 3 to 8 Cylinders
3—Mfg. Under Waukesha-Hesselman License
4—Also Built in 1, 2, 3, 4 and 5 Cylinders
5—Also Built in 1, 2 and 3 Cylinders
6—Also Built in 2, 3 & 4 Cylinders
7—Also Built in 2 Cylinders
8—Also Built in 3, 4 & 5 Cylinders
9—CR Series also Built with 3 Cylinders
10—LC Series also Built in 3 & 4 Cylinders
11—Also Built with 6 Cylinders
12—Also Built with 4, 6 & 8 Cylinders
12—Also Built with 6 Cylinders

ABBREVIATIONS

°—Others Also
*—Horizontally Opposed Twin
**—Four-wheel Drive
†—Fitted with Supercharger
††—Front-wheel Drive
‡—Complete Car Weight
§—Preselective Gear Box
1—200 Hp. with Supercharger
2—160 Hp. with Supercharger
2c—2 cycle
3—This same car built as a sports model 411S. Bore 3.49 in. Displacement 141 cu. in. Gear Ratio 4.8. All other specifications remain the same.
a—Main Bearing
Al—Aluminum Alloy
Als—Aluminum and Alloy Steel Strut
Am—Amal (Carburetor)
b—Camshaft Bearing
B—Battery
Be—Bevel Gear
c—Connecting Rod Bearings
C—Mechanical and Hydraulic (Brakes)
Ca—Carter (Carburetor)
CH—Claudel Hobson
Ch—Chain
Cl—Cast Iron
Co—Cosette (Carburetor)
d—Piston Pins
Do—Downdraft (Carburetor)
Dp—Double Plate, Dry (Clutch)
e—Chain or Timing Gears
E—Electromagnetic
En—Unit with Engine
F—Front (Independent Suspension)
F—In Head and Side (Valves)
FR—Front and Rear
FW—Front-wheel Drive
Gr—Gravity
H—Hydraulic (brakes)
He—Helical Gear
Ho—Horizontal (Carburetors)
Hr—Horizontal
Hyp—Hypoid Gear
I—In Head (Valves)
I—In Line (Cylinders)
Int—Integral with Cylinders
L—At Side (L Head)
M—Mechanical (Brakes)
MB—Battery and Magneto
MD—Multiple Disk
Me—Memini
N—No or None
O—Own
Pal—Pallas
Pr—Pressure
Pu—Pump
R—Rear Wheels
Ra—Unit with Rear Axle
RA—R.A.G.
SB—Spiral Bevel
SC—Spiral Bevel and Chain
Sch—Schebler
Se—Separate Unit
Sep—Separate
Sg—Spur Gear (Camshaft Drive)
Sl—Sleeve Valve
So—Solex (Carburetor)
SO—Single Plate in Oil (Clutch)
sp—Springs
SP—Single Plate, Dry (Clutch)
Spla—Splash
St—Straight Bevel
Str—Stromberg
SuSp—Supercharged Special
ta—Torque Arm
TB—Straight Bevel
Th—Thermo Syphon (Cooling System)
tt—Torque Tube
Up—Updraft (Carburetor)
V—Vee Type (Cylinder Arrangement)
Va—Vacuum (Fuel Feed)
Web—Weber
Wo—Worm Drive
Y—Valveless—2 Cycle
Ze—Zenith (Carburetor)

American Passenger Car Engine Trends

(Based on Number of Models Offered)

Feb. Racing Toward 340,000 Goal; See 400,000 for March; Sales Gain

DETROIT, Feb. 21—Motor car production this month promises to attain the 340,000 units predicted earlier in *Automotive Industries* and may go even higher if certain obstacles holding back some companies are removed. March assemblies should easily top 400,000 units and possibly may reach 425,000. Indications point to the fact that April is likely to be the peak month this year, with a mild recession in output during the following two months.

The psychological effect of the gold decision will be to further loosen purse strings of car buyers and particularly should be stimulating to sales overseas which are so dependent on favorable exchange rates. A fairly large percentage of the cars coming off assembly lines are continuing to go almost directly into consumers' hands, although in some cases it is believed dealers are beginning to acquire stocks. .Several prominent car manufacturers declare that the pressure from dealers for immediate delivery of cars has not been relieved. Even with factories working virtually at capacity, a few companies report that their backlog of unfilled orders has been growing.

The widespread distribution of retail sales, with sizeable increases registered in almost all sections of the country, is a notable and encouraging development. Only in one or two districts, such as the citrus fruit area in Florida where severe weather has done great damage, have sales failed to respond to the buying urge. Retail demand has been especially good in the Mississippi valley and the south, the improvement being attributed to enlarged farm incomes from higher commodity prices and to cash disbursements by the Federal government for crop curtailments.

Wage Dispute Causes Strike at Myers Co.

Chrysler Supply Concern Shuts Plant as Workers Walkout on Election Eve.

TOLEDO, Feb. 20—The Myers Regulator Co., suppliers of window regulators and hardware for the Chrysler Corp., closed its plant at 3 p. m. today because of a strike among its employees. Two weeks ago the sub-Regional Labor Board of Ohio entered the dispute between the management and workers when a brief strike begun over wage differences. It is said a difference of two cents per hour in the wage rate led to the failure of the second shift reporting for work today. Three persons were reported hurt slightly in altercations arising from an unorganized picket line.

Officials of the Myers Co. stated its plant would remain closed until the present difficulties are settled. Recently, it is said, Chrysler officials threatened to remove certain machinery in the Myers plant to Detroit plants of the Chrysler Corp.

The company was scheduled to hold a plant election among employees Thursday, but the present strike makes this impossible. Approximately 400 workers are affected by this latest walkout.

Eastman Asks Control of Transport Codes in Bill

Hearings on HR 5262, a bill to regulate interstate motor carriers, got under way this week before a sub-committee of the House Interstate Commerce Committee. Federal Coordinator Eastman, sponsor of the bill, was the first witness. Among other things he suggested that the Coordinator be authorized to take over the administration of transportation codes. A battle developed early over the extent of control the ICC should be given over intrastate rates with the National Association of Railroad and Utilities Commissioners fighting to minimize such control and taking the position that it would rather have no bill than to have the doctrine of the so-called Shreveport rate cases apply.

Meanwhile the American Trucking Associations, Inc., reports that its statistical division is working 24 hours a day preparing the trucking industry's presentation on the bill.

A sub-committee of the Senate Interstate Commerce Committee will begin hearings on the bill on Feb. 25.

Sears to Organize Foreign Sales Co.

Sears, Roebuck and Co. plan to organize a subsidiary, Sears, International, Inc., according to the British Motor Trader, to dispose of surplus stocks abroad. The plan, says the British journal, does not include competing with British mail-order houses or the creation of a selling organization, but that merchandise will be distributed through ordinary wholesale channels. Some of the merchandise the new company hopes to sell in Great Britain includes tires, inner tubes, spark plugs, garage accessories and electric equipment.

Greene, Hilman Direct DeSoto Adv. and Service

Burch E. Greene has been appointed director of advertising and sales promotion and W. A. Hilman, director of service for the De Soto organization, Byron G. Foy, De Soto president, has announced.

Mr. Greene and Mr. Hilman now hold similar positions with the Chrysler Sales Corporation and will continue to supervise the advertising and service activities of the Chrysler unit as well as De Soto.

AMA's Gift Enables Harvard Research Bureau to Expand Street Safety Study

Greater safety on the highways and the elimination of costly traffic congestion are twin objectives of an expanded program of highway research being initiated at the Bureau for Street Traffic Research at Harvard University, it has been announced. Reorganization and expansion of the research activities of the university's Bureau for Street Traffic Research have been made possible through a gift to the university by the Automobile Manufacturers' Association.

This contribution by the Automobile Manufacturers' Association indicates that leaders of the motor industry recognize the opportunities for improving the accident situation and increasing the efficiency of highway transportation through the scientific development of sound engineering and administrative principles.

"Although all studies of accident causes are unanimous in their conclusions that from 80 to 90 per cent of traffic mishaps are traceable directly to some form of human fallibility on the part of the individual motorist or pedestrian," Alfred Reeves, AMA vice-president, said, "there is abundant evidence that through engineering, safeguards for the greater protection of highway users can be devised."

The new program of Harvard's Bureau for Street Traffic Research will be conducted by its Director, Dr. McClintock, along the same lines as those followed in the past. Falling within the scope of the program are such subjects as rational and uniform legislation and ordinances, police organization and enforcement of traffic laws, efficient traffic engineering technique and organization, and the design of new and basic types of traffic facilities especially for urban areas. The Bureau will continue its efforts to educate and develop traffic experts

Ford Puts March Schedule at 160,000

The largest domestic production of Ford V-8 cars and trucks since the V-8 engine was introduced, has been scheduled for March, the projected total being 160,000 units requiring a daily output of 6000. This compares with 77,947 last year and will bring output in the first quarter to more than 390,000 units.

through the cooperation of the university's Department of Government, and its Schools of Engineering, Business Administration and City Planning.

Under the Bureau's plan for cooperation with governmental agencies, provision is made whereby responsible officials of state and local governments may call upon the Bureau staff for information and advice bearing upon local problems of safety and congestion.

Coincident with the announcement of the Bureau's expanded program, it was revealed that Maxwell N. Halsey has been appointed its Assistant Director. A graduate of the Harvard organization, Mr. Halsey has held numerous responsible engineering positions in engineering and private organizations interested in traffic control problems, the most recent being that of traffic engineer for the National Bureau of Casualty and Surety Underwriters.

New Indiana Truck at $695

A new streamlined Indiana truck with a gross capacity of 11,000 lbs. and priced at $695 is anonunced by the White Motor Co. Deliveries will begin March 15. The 1935 production schedule on this model is 10,000. The new truck has a 263 cu. in. engine, hydraulic brakes, ventilated disk wheels, deep-skirted fenders, cadmium-plated radiator grille and a sedan type cab.

APEM Endorses Code Amendment Requiring Time & Half Over 48 Hrs.

A resolution endorsing an amendment to the APEM code requiring member employers to pay time and a half for all hours worked in excess of 48 per week, was unanimously adopted by the annual meeting of that organization held in Detroit on February 15. This amendment will make the parts makers subject to the same wage rules as have been in effect in the automobile manufacturing industry since the President extended its code in amended form on January 31.

C. C. Carlton was re-elected president of the association. The directors also named Ben F. Hopkins, Cleveland Graphite Bronze, vice-president; M. C. DeWitt, Champion Spark Plug, secretary, and William Hancock, of McCord, treasurer. C. O. Skinner continues as executive secretary.

The following were elected directors-at-large: C. S. Davis, Borg Warner; C. E. Wilson, General Motors; Vincent Bendix, Bendix Products; Mr. Hopkins, Mr. DeWitt, Lothair Teetor, Perfect Circle; and Hugh Weed, Carter Carburetor. The executive committee consists of: Messrs. Carlton, Bendix, Davis, and Hopkins.

The meeting discussed at length a proposed amendment to the code which will come up for hearing in Washington on February 27. This amendment more clearly defines the coverage of the APEM code and is intended to eliminate existing conflicts with various code authorities as to who has authority over certain manufacturers.

Mr. Carlton reported that a total of 10 supplements to the code have been approved and that five more await approval. He said that fair trade practices provided for the industry were generally disappointing, but he expressed the belief that policy changes impend in Washington which would permit insertion of better clauses on "selling below cost" and a more practical price filing provision.

There have been few cases of flagrant code violation, Mr. Carlton stated, and all of them have been remedied, in most cases violators making restitution which in one instance amounted to over $6,000.

Mr. Carlton also discussed efforts of the

Steel Price Changes Believed Unlikely

Begin Filing 2d Quarter Rates; No Slowing Down of Motor Purchases Seen

Filing of second-quarter prices with the American Iron and Steel Institute as code authority has begun. It is intimated there will be no changes from current quotations. If this proves true, steel buyers will have at least three months' respite from advances that may result in commodity values in general in consequence of the Supreme Court's gold decision.

The American Iron and Steel Institute's report for this week's rate of operations—49.1 per cent of ingot capacity—denoting a dip of approximately 3 per cent from the preceding week's operating rate, is interpreted in some quarters as denoting tardiness in adjusting primary production to finished steel demand rather than any slowing down in steel buying. One hears here and there of automobile manufacturers deferring the placing of orders for steel bars because of their inability to obtain as prompt deliveries of automobile sheets as perfectly coordinated assembly schedules call for.

Automotive buyers are well aware of the need for anticipating their requirements of full-finished sheets more so than those for other descriptions of steel. Speeding up of Chevrolet production next month is expected to make up for what easing off in Ford takings might come to pass. Automotive alloy steel specialists continue to operate at a satisfactory rate. Demand for manufacturing wire for wheels and upholstery springs is well maintained. Movement of bolts and nuts into automotive consumption continues brisk, predictions of price advances at the earliest possible moment being frequently heard.

Pig Iron—Takings by automotive foundries have now reached the point where Lake furnaces are shipping more iron than they are producing, the remedy for this condition being the lighting of furnaces now idle and some of which are being made ready for early resumption of output. The Middle West price for both No. 2 foundry and malleable continues to be $18.50, basing point.

Aluminum—Quotations for virgin metal are unchanged. The tone of the market for secondary metal is a shade easier, reflecting the better supply of scrap.

Copper—Copper and brass fabricators are taking relatively good-sized tonnages of "Blue Eagle" copper. The picture of the world market is also somewhat brighter, world stocks of refined copper having been reduced by 7,000 tons in January. The "outside" market is nominally quoted at 7.60 cents, as compared with the "Blue Eagle" price of 9 cents, delivered Connecticut point.

Tin—Following spells of weakness, resulting in part from the uncertainty over the gold decision and in part from the aftermath of the disturbance in the London market, Straits tin staged a recovery, spot metal being held at 50.45 cents at the market's close on Monday.

Lead—One of the two leading marketers continued to quote $1 per ton higher than the other at the opening of the week. An advance in ore prices gave the market a stronger undertone, immediate demand, however, being light.

Zinc—Firm and quiet.

GM Canadian Output for 5 Weeks Double '34 Total

Production of passenger cars and trucks for the first five weeks of this year by General Motors of Canada, Ltd., is more than double the output for the corresponding period of last year, according to C. E. McTavish, general sales manager. Quantity production has begun on the new model Master Chevrolet, he said.

Production schedules on both Pontiac and Oldsmobile have been increased, Mr. McTavish reported, as evidenced in the delivery of more than 1100 more of these cars than during the same period of 1934. Truck assembly for the period has increased 35 per cent over the same time last year.

Agency for Accrediting Engineering Schools Ok'd

Approval of the Engineers' Council for Professional Development as the agency for accrediting engineering colleges was conferred by the American Institute of Electrical Engineers recently, thus completing the authorizations needed to inaugurate the accrediting procedure which has already been approved by the other participating bodies—American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, The American Society of Mechanical Engineers, Society for the Promotion of Engineering Education and National Council of State Boards of Engineering Examiners.

Accrediting of individual institutions and of curricula offered by them will be upon invitation of the institutions. Formal notification of the launching of the accrediting program will be sent by the committee to officials of the institutions in the near future.

Inquiries as to any phase of accrediting should be addressed to the Committee on Engineering Schools, Engineers' Council for Professional Development, George T. Seabury, secretary, 29 West 39th Street, New York, N. Y.

Discrimination No Problem; Bargaining Progresses in Industry, ALB Reports

Against a background of more than ten months spent in grappling at first hand with the labor problems of the automotive industry, the Automobile Labor Board, in a report to the President made public this week, paints a picture that contrasts sharply with the representations made in the Henderson report on the basis of a survey covering a few weeks.

The Henderson report, it will be recalled, charged that espionage systems are widespread, that the industry discriminates against age, and that hiring and rehiring methods are inequitable. It also concluded that many of the complaints against management—such as poor working conditions, terror, and discrimination—will disappear when and if facilities are fully extended for collective bargaining, a pointed thrust at the Automobile Labor Board.

Now there doesn't seem to be much point in maintaining espionage systems unless the information they produce is to be used to discriminate in one way or another against employees. On this point the ALB report says: "It is the Board's judgment after ten months of experience in the industry that discrimination caused by union activity or union membership is not a problem of any magnitude at the present time and has not been for some time in the past. Wherever agreements are made between the industry and the Board or the industry and labor to return men to work or to restore employees their seniority, it is the Board's information that these agreements have been fairly observed. Furthermore, in all of the many instances in which the Board has ordered individuals or groups back to work, they have been returned to work so far as the Board knows. Few cases have been brought to the Board's attention of violation of its orders and decisions."

The charges of inequitable hiring and rehiring methods and of discrimination against age, are all a part of the seniority issue. On this important topic, the ALB report says that since its seniority rules were promulgated, "the automobile industry has gone through one complete season of lay-offs and a large part of the next following season of rehiring. In view of the turnover of labor which normally takes place during such periods, the number of cases the Board has received involving seniority is relatively small. This fact and the Board's general familiarity with the situation lead us to conclude that in general the industry has observed the rules fairly and carefully. . . . The seniority system now in effect depends upon the President's Settlement. . . . Under the system and the Board's rules and rulings, every worker in the industry under the Board is protected by an orderly and legal method in his lay-off and rehiring, with review by the Board if necessary. He thus finds himself protected not only against the possibility of the lay-off period or the period of rehiring being used as a method of discriminating against him for ulterior motives growing either out of the struggles about organizing or out of alleged personal favoritism of the lower supervision, which causes so much uneasiness in the minds of the workers, but above all against the general hazards and uncertainties of lay-off and rehiring. . . ."

The reference to "personal favoritism of the lower supervision" is interesting in connection with the emphasis the Henderson report places on the alleged tyrannical practices of the industry's foremen.

The question of whether collective bargaining is—or is not, as the Henderson report concludes—being practiced in the industry, gets an emphatic answer in the ALB report. "So far as the practice of industrial relation in the industry is concerned, there can be no question but that the levels of prevailing relationships have been materially raised during the past year, and that collective bargaining between the management and representatives of many groups of workers is being extensively carried on through the industry. . . . In many plants the plant management regularly negotiates with shop stewards representing local organizations of the American Federation of Labor, and the Board has had reports from the officers of various unions that their relations with the company are satisfactory. The Board has dealt promptly with all complaints that representatives of employees are not being met for purposes of negotiating and bargaining.

Meet With AFL Unions

"Officers of the American Federation of Labor local unions in the automobile manufacturing industry constantly are engaged in negotiation with the managements on various matters. The great number of cases settled as a result of these processes of conference and negotiation is the best test of the degree to which the methods of collective bargaining are being observed within the industry. At the time of the large seasonal lay-off last summer, in one of the plants in the industry the officers of the union took up all of their complaints regarding the application of the seniority rules directly with the management of the company. After more than ten thousand employees had been laid off, there were only twelve disputed claims which were presented to the Board. . . . A similar record can be produced for a large number of plants in the industry.

"The Board regards collective bargaining as a peaceful process which can only be successfully worked out with patience and with understanding. It is perfectly clear from our experience that long formed habits cannot be overnight changed by fiat, and that the experience and skill requisite to successful negotiators cannot be suddenly supplied by mandate. Both the industry and employees have already gone a long way in learning what is required of them under the law and orders of the Board, and in adjusting their policy to these requirements. The opportunities which now exist in the industry for employees to present their grievances and to have them considered and disposed of in joint conferences are of inestimable value to the automobile workers and are so regarded by them."

Discussing elections, the report says ". . . 90 per cent of the eligible voters voted, and 94 per cent of those that worked on the day of the election voted. Those who have not voted represent, in the main, those employees who happened to be absent on the day of the election. They are clearly not members of any group who either have been instructed to abstain from voting or who themselves have resolved to do so."

Representatives elected have been invited to confer with the Board and several such conferences have been held, the ALB report says. At these meetings questions of immediate concern have been discussed as well as such details as time and place of meetings, the appropriate relations between the representatives and their constituents, the source and method of payment for time lost when acting as a representative and the like. On all of these matters the Board is working and will lay down rules and regulations governing the conduct of industrial relations under this relationship.

FWD Sales Up 91% in '34; Assets Eight Times Debts

Sales of FWD trucks during 1934 increased 91 per cent over 1933 and the increase in total business for the Four Wheel Drive Auto Co. from all sources climbed 69.2 per cent over the previous year, Walter A. Olen, president, announced at the annual stockholders' meeting last week. The meeting was held at the Clintonville, Wis., plant of the company.

Mr. Olen also reported there has been a 60 per cent increase in the total of man-hours of employment, and 11 per cent of the work increase was attributable to the application of the NRA code. Each man in the plant has a $1000 life insurance policy, partially paid by the company, Mr. Olen reported, and each employee also carries a health and accident policy. A chart was exhibited at the meeting showing the company's current assets 8.9 times greater than current liabilities.

Packard Schedules 4500 New Model 120 per Month

The new Packard plant in Detroit in which the Packard 120 is being produced officially went into production last Wednesday. Frank Couzens, Detroit mayor, drove the first of the new cars off the assembly line. At that time company officials announced the company will build 2000 this month, 4000 in March and 4500 per month after that.

Canadian Govt. Adamant On Drawback Enforcement

Efforts of the automobile industry within the past few weeks to dissuade the Canadian government from pursuing the new method of enforcing the drawback item have failed to bring a modification of the policy. Under the terms of the drawback item on automobile parts, a rebate of duty is allowed if the content of the finished product represents Canadian material and/or wages of 50 per cent. Prior to July, 1934, successive governments permitted manufacturers to qualify for the drawback on the basis of total plant production rather than on individual models.

However, according to officers of the Crown, the law intends the item to be administered on the basis of individual models and the change of enforcement procedure has been ordered. An amendment to the act, it is pointed out, would be necessary to retain the former regulations desired by manufacturers, and it is held unlikely the government has any intention of introducing such an amendment. It has been said, though, that the cabinet is not adverse to facilitating a reference of the question to the Tariff Board.

Commercial Vehicle Body Code Amendment Sought

An application to amend the commercial vehicle body industry's code has been submitted by the code authority for that industry. It is proposed to delete the parenthetical phrase in Article II "except those manufactured by or sold to the manufacturer or assembler of motor vehicle chassis" and substitute, in brackets, "except those manufactured by automobile manufacturers or assemblers and those manufactured by manufacturers who sell exclusively to automobile manufacturers or assemblers." A hearing on the application for the amendment will be held before Jo G. Roberts, NRA Deputy Administrator, in Washington, March 5.

Briggs Employment Gains

Employment at the Detroit plants of the Briggs Manufacturing Co. has risen to 29,000 workers, of which approximately 6500 were added during January, according to an announcement by W. P. Brown, general manager. The plants, the report indicates, are operating at a rate near to capacity.

Green Tour Winds Up With Detroit Broadcast; Unions Consider Merger

DETROIT, Feb. 21—A. F. of L. president William Green's tour of automotive centers this week ended with a meeting in Milwaukee on Wednesday following which he left for Washington to testify in connection with pending legislation in Congress. He will be in Detroit on Saturday, however, when his speech will be broadcast over an NBC hook-up. Meetings scheduled for Lansing and Flint consequently were not held, the Federation claiming that they were cancelled before Mr. Green began his trip.

It is understood that the switch in Mr. Green's schedule in no way changes the plans of the Federation to formulate demands to be made on certain key plants. A strike vote already has been taken in one parts plant in Detroit and one is reported to be scheduled shortly by the federal union at the plant of the Kelsey Hayes Wheel Corp.

The Detroit Labor News, official paper of the Detroit Federation of Labor, in a leading story in its last issue, invited the MESA, the Society of Designing Engineers and the Dingmens' Association to join the American Federation of Labor, stating that the history of divisions within labor's ranks into various industries has shown that such disruption was fatal to unionization.

Matthew Smith, general secretary of the MESA, has issued a formal reply suggesting that contact committees from all unions involved meet and formulate recommendations to be carried back to their respective bodies. He stated that the unions should unite on a program of immediate demands involving the 30-hr. week, $40 minimum weekly wage and full wage insurance for unemployed workers. He declared also there should be an agreement on "rank and file control of officials and policy," thus voicing his objection to union operations being controlled by an appointed executive as in the set-up of the A. F. of L. unions.

Declaring that his organization has several thousand former members of the International Association of Machinists, an A. F. of L. affiliate, Mr. Smith asserts that if the MESA merged with the Federation, its members immediately would be passed through the federal locals back into the machinists' union. The matter then devolves into the question, "Will the MESA agree to be absorbed by the IAM? Will 7000 tool and die makers agree to join the IAM local with less than 100 members?"

Incidentally press reports say that in the coming MESA elections there is a possibility that Mr. Smith will be dislodged from his position of leadership.

DETROIT, Feb. 20.—President William Green, of the American Federation of Labor, is authorized to request a conference with Alfred P. Sloan, Jr., president of General Motors, for the purpose of negotiating a mutually satisfactory agreement relating to wages, hours and conditions of employment to be approved by the directors of the corporation and members of the United Automobile Workers Unions, according to a resolution unanimously passed at mass meetings held this week by the Federation in Cleveland, Toledo, St. Louis and South Bend, at which Mr. Green was the chief speaker.

The resolution condemns "those who prevented the President from having the benefit of the advice and counsel of our duly accredited representatives" in the renewal of the automobile code and protested the continuation of the Automobile Labor Board, asking that a new Board be set up under the provisions of Joint Resolution No. 44 of the last session of Congress. The resolution also expressed gratitude to Senator Lewis B. Schwellenbach for his interest in sponsoring an investigation of the automobile industry. The resolution is to be sent to President Roosevelt, President Green of the Federation, and Secretary of Labor Perkins.

In the resolution, the Federation is designated by those present at the meetings as "our bargaining agency between employer and employee in the automobile industry." Mr. Green, in addressing his audiences, warned that "if industrial strife results, it will be because of the failure of the employer to concede to his employees rights and privileges which the employer seeks to utilize for his own benefit while denying the same rights and privileges to his own employees."

AFL Detroit Meeting

It is understood that a resolution similar in every respect to the one passed in the four cities already mentioned was offered and presumably adopted in Milwaukee. Arrangements have been made for a national hook-up for the Detroit talk Saturday night over the network of the National Broadcasting System. It is reported that NBC is donating the time and will give the manufacturers an opportunity to reply later if they so desire.

The National Council of the United Automobile Workers Federal Labor Unions affiliated with the A. F. of L. will convene in Detroit on Feb. 23 with Mr. Green present, to lay general plans and to formulate demands on the automobile companies. It appears clear from the trend of the A. F. of L. program, that the Federation intends to make demands on certain companies. It is felt that these demands will be refused and that a strike is then likely to be attempted in the next two weeks. It seems to be the Federation's hope that it can tie up production sufficiently well that President Roosevelt will intervene, and as one of its peace terms the Federation would ask for abolition of the Automobile Labor Board.

In his speeches, Mr. Green has been advocating abolition of the Automobile Labor Board, the six-hour, five-day week without any reduction in pay, the annual wage basis, and elimination of company unions. He stated that there were now 176 automotive unions affiliated with the Federation and that they are to be formed into the International Union of Automobile Workers. When asked about a general strike in the industry March 1, Mr. Green said plans on that had not gone far but he recalled that talk of a general strike got action. "Those who would be free must strike the blow themselves," he declared. "But if reason fails and logic is ineffective we will lead our forces on the battle field and fight until we force recognition."

At the Cleveland meeting, F. J. Dillon, the Federation's Detroit organizer, struck a belligerent note when he said, "We are here to see if you are prepared to move out and stay out when the order comes." Mr. Dillon incidentally has recently addressed "large and enthusiastic audiences of automobile workers," an A. F. of L. statement says, in Washington, D. C., Atlanta, St. Louis, Janesville, and Chicago. At all of these meetings a resolution was adopted similar to the one voted at the Green meetings this week.

While the Federation apparently plans to use the endorsement it received at the Green and Dillon meetings to prove that it represents automotive workers, the difficulties it will face in authenticating its claim are obvious. This will be particularly true in Detroit, where in election after election held by the ALB, a government agency, only very small minorities have indicated that they wanted to be represented by Federation unions.

Last week, it is reported, a Federation local in Cleveland submitted a contract to Fisher Body, which labor leaders are said to view as a move for a determination of the questions at issue. The contract is said to ask for the six-hour, five-day week, minimum annual wages of $1560 for unskilled and of $1820 for skilled workers, arbitration of disputes, and full pay for employees found to have been fired unjustly.

Formation of the proposed International Union of Automobile Workers would put the automotive unions in much the same position as organizations in other industries. At present the locals are affiliated directly with the Federation, but under the new plan they would be members of the International which in turn would be affiliated with the Federation.

First ALB elections outside of the City of Detroit are being held this week. The nominating elections at the Pontiac and Fisher plants in Pontiac were scheduled for Feb. 21, and at General Motors Truck in Pontiac and at Fisher Body in Cleveland on Feb. 22. The final election at Packard is to be held in Detroit next Tuesday and on the same day nominating elections will be held at Graham's, Warren Avenue, Detroit, and Wayne, Mich., plants. Next Wednesday nominating elections will be held at the Olds plant in Lansing during the week at the Fisher and Reo plants in that city.

Out of a total of 66,122 votes cast in 15 plant elections in Detroit through Feb. 12, a total of 50,121 workers, or 76 per cent, designated no union affiliation. Employee associations drew 7,639 votes, 11 per cent, the AAWA 3,173 or five per cent, and the A. F. of L., 2596, or four per cent.

Through application of proportional representation, the ALB has increased the membership of the AAWA on the Hudson bargaining committee to put it on a par with the Hudson Industrial Association.

Titeflex

ALL METAL • FLEXIBLE

DUE to improved methods of manufacture, and greatly increased use as original equipment, Titeflex is now made available from an economic standpoint, for large production accounts.

● Automotive engineers from their extensive experience with the deteriorating action of gasoline and oil on composition material, naturally desire to use an all-metal flexible gasoline or oil line.

● Titeflex is supplied in all standard sizes from 1/8" to 3" with corresponding pipe threaded male, female or union ends. Titeflex also supplies a complete line of S.A.E. fittings of all standard sizes, and all-metal exhaust tubing in all 1/4" sizes from 1" to 4" inclusive.

● Titeflex is very flexible, it is all-metal, and carries gasoline or oil under pressure. It absorbs vibration, it does not crystallize, and it does not break. No rubber is used in its construction.

GM Plans Production of Diesel-Electric Equipment

According to Alfred P. Sloan, Jr., GM president, General Motors plans to enter the railroad field with a line of diesel-electric locomotive equipment. GM is said to have taken an option on property near Chicago where a manufacturing plant is to be erected as a part of the Electro-Motive Corp. The new set-up will enable General Motors to produce complete diesel-electric locomotives for switching and for hauling standard railroad rolling stock.

New Coil Spring Concern to Open in Adrian, Mich.

The Stubnitz-Greene Spring Corp., said to be a $100,000 concern, will manufacture coil springs for automobile upholstering and furniture, and will occupy the former plant of the Adrian Wire Fence Co. at Adrian, Mich. Headed by M. Stubnitz as president and general manager and D. A. Greene as vice-president and treasurer, the company began moving into the Adrian plant this week. When in operation it is reported the concern will employ between 200 and 300 men.

B. H. Gerker Joins Carter

B. H. Gerker, formerly resident engineer with Chevrolet Motor Company at Flint, has been appointed production engineer with the Carter Carburetor Corporation of St. Louis.

The rapid growth of Carter Carburetor Corporation and greatly increased production, calls for an increased personnel in the Standards Division.

Woolman on NSPA Board

L. F. Woolman of the Allen Electric & Equipment Corp., Kalamazoo, Mich., has been appointed as ad interim director of the National Standard Parts Association by President Dave Rodger, to fill the vacancy created by the resignation of H. M. Smith. At the January board meeting Mr. Smith announced he had severed his connection with the Kellogg Equipment Corp., of which he was the official delegate.

Name Buchenberg to Ohio Labor Relations Board

The National Labor Relations Board has appointed A. E. Buchenberg, director of engineering for the Electric Auto-Lite Co. as a member of the Toledo panel of the Regional Labor Board for the eighth district. His appointment fills the vacancy created by the death of John A. Schultz, Jr.

Faeh C.A.T.A. Manager

A. C. Faeh, general manager of the Chicago Automobile Trade Association from 1930 to 1932, and more recently manager of the 1935 annual Chicago automobile show at the Coliseum, has been reappointed as the association's general manager, it is announced by M. J. Lanahan, president.

Business in Brief

Written by the Guaranty Trust Co., New York, exclusively for Automotive Industries

There was a slackening in activity in some branches of industry last week, but others continued to register gains. After 16 successive weeks of increases, steel operations fell off moderately. There was a further decline in commercial failures. Most of the losses in commodity markets at the beginning of the week were made up by strength during the latter part. A good volume of both retail and wholesale trade was reported.

Car Loadings Decline

Railway freight loadings during the week ended Feb. 9 totaled 592,560 cars, which marks a decrease of 5604 cars below those during the preceding week, an increase of 18,662 cars above those a year ago, and an increase of 89,897 cars above those two years ago.

Store Sales Lower

Sales of department stores during January decreased by more than the estimated seasonal amount. The preliminary adjusted index of the Federal Reserve Board for that month stood at 72, based on the 1923-25 average as 100, as against 76 for December and 73 for November.

Chain Sales Gain

Sales of 22 store chains during January amounted to $111,495,200, which marks an increase of 4.5 per cent above those in the corresponding period last year. Sales of two mail order companies for January were 12.3 per cent above those a year ago.

More Current Produced

Production of electricity by the electric light and power industry during the week ended Feb. 9 was 6.8 per cent above that in the corresponding period last year.

USCC Report Encouraging

A report issued by the Chamber of Commerce of the United States indicated that business improvement continued during last month. It was stated that industrial production last year was about 25 per cent above that in 1932, which was the low year of the depression.

Crude Oil Output Up

Average daily crude oil production for the week ended Feb. 9 amounted to 2,511,150 barrels, as against 2,448,000 barrels for the week before and 2,284,200 barrels for a year ago.

Fisher's Index Higher

Professor Fisher's index of wholesale commodity prices for the week ended Feb. 16 stood at 82.4, as against 81.7 the week before and 81.6 two weeks before.

Federal Reserve Statement

The consolidated statement of the Federal Reserve banks for the week ended Feb. 13 showed an increase of $1,000,000 in holdings of discounted bills. Holdings of bills bought in the open market and of government securities remained unchanged.

SAE Fixes Procedure for Giving Lubrication Data

A uniform and simplified procedure for supplying motor-vehicle lubrication data by the equipment manufacturer to the various interested organizations such as the oil companies, trade papers, etc., has been developed by the lubricants division of the SAE Standards Committee.

In accordance with the committee's recommendations, the SAE has printed a standard form—Motor Vehicle Lubrication Data Form—in four sheets, containing all the information necessary to cover every phase of the lubrication of any vehicle. By using this form, the manufacturer can fill in the approved data and then make copies by blueprinting, photostating, or lithographing. These copies would be mailed to interested people in much the same fashion as the AMA specifications questionnaire.

This project originated with a suggestion made some time ago by L. A. Danse of Cadillac Motor Car Co. The committee appointed to develop the project consisted of Dr. K. G. Mackenzie, Sydney Bevin, C. M. Larson, G. A. Round, E. W. Upham, H. C. Mougey and A. L. Clayden.

J-M Publishes "Noise Fighters"

Johns-Manville has just published a booklet entitled "Noise Fighters" describing the work of its acoustical research laboratories, which include, among other activities, the study of automobile body noises.

BUNDYWELD Tubing for Durability · Dependability · D - - - - ?
Manufactured by BUNDY TUBING COMPANY · 10951 Hern Avenue · Detroit

Merz Succeeds Edenburn as Indianapolis Steward

Charles Merz, former race driver, has been selected to succeed the late W. D. Edenburn as steward in charge of the annual 500-mile race at the Indianapolis Speedway, and official representative of the Contest Board of the American Automobile Association. As such he will be in charge of all drivers during both their qualifying runs and their actual competition and will take an actual part in the settlement of all disputes.

ALB's End, 30-hr. Week Sought by Mich. AFL

Resolutions favoring a 30-hour week for Michigan industries, and a request that President Roosevelt abolish the Automobile Labor Board and place the functions of this board in the hands of the National Labor Relations Board were passed at the annual state convention of the American Federation of Labor in Lansing last week.

Conditions in automobile plants throughout the state were attacked by several speakers at the meeting, and it was indicated that definite action to bring about changes would be taken before March 1.

First Packard 120 Off the Line

Alvan Macauley, Packard president, and Mayor Frank Couzens of Detroit participate in a broadcast of the ceremonies held in connection with putting the new medium-priced Packard into production

President Asks NRA Extension, Leaves Job of Solving Problems to Congress

WASHINGTON, Feb. 20—Leaving to Congress the job of working out the detailed answers to many of the problems that have plagued NRA, President Roosevelt today urged extension of the National Industrial Recovery Act for two years, continuing its fundamental purposes and principles.

His recommendations, which were couched in general terms, may be summarized as follows:

Further definition of the policy and standards of the Act to clarify the administrative job.

The government should have power to impose codes consisting of minimum standards of fair competition, including particularly labor standards.

Collective bargaining rights should be protected.

Fundamental principles of anti-trust laws should be more adequately applied with "private price fixing" barred. In natural resource industries, destructive price-cutting and competition should be prevented under government supervision.

The way to enforce laws, codes, etc., relating to industrial practices is not to put people in jail. By implication, the President appears to favor wider use of injunctions and of "cease and desist orders."

Detailed recommendations along these lines, but in rough form have been made by various departments and agencies of the government, the President indicated, and are available to Congress.

The President's reference to "private price fixing" is not interpreted as precluding open price filing under proper conditions.

Regent Maroon Preferred Car Color, Survey Shows

A questionnaire, conducted by the Automobile Color Index, and sent to approximately 1000 automobile executives, designers, dealers and advertising men, shows that Regent maroon, a very dark and heavy shade, is the leading color preferred this year for motor cars. Each recipient of the questionnaire was asked to make a first, second, and third choice from 72 actual samples of colors sent. The answers also showed that blue is still a favorite, for four out of the 10 selections gave blue, in one shade or another, as a preference.

Flanagan Joins Rowland

James F. Flanagan, who for the past 16 years has been vice president and secretary of the Burton Auto Spring Corporation of Chicago, has joined the firm of William and Harvey Rowland, Inc., Philadelphia, which he will represent in the west and middle-west, with headquarters in Chicago. The Rowland firm has a manufacturing plant in Chicago from which it supplies the jobbing trade in the western part of the country.

N.A.M. Tabulates Security Bill Costs

The National Association of Manufacturers has made the following tabulation of the direct costs to industrial employers of the Social Security Bill now before Congress.

	1936		1937		1947	1957
Annual Payroll	Minimum	Maximum	Minimum	Maximum		
$100,000	$1,000	$3,000	$1,500	$3,500	$4,500	$5,500
500,000	5,000	15,000	7,500	17,500	22,500	27,500
1,000,000	10,000	30,000	15,000	35,000	45,000	55,000
3,000,000	30,000	90,000	45,000	105,000	135,000	165,000
10,000,000	100,000	300,000	150,000	350,000	450,000	550,000

In addition to this direct cost is the employer's share of additional Federal expenditures now provided in the bill—$217,500,000.

In addition also is the employer's share of state old age assistance plan, state mothers pension plans, state plans for child health, all provided for in this bill.

The employer must eventually also pay huge special expenditures which the old age assistance and old age pension provisions of the act will require, since as now proposed the costs set forth above will be insufficient to keep the plans solvent.

Senate Judiciary Committee Gets Black 30-hr. Bill Despite Bitter Opposition

WASHINGTON, Feb. 21 — Opposed by the administration and bitterly fought by industry, the Black 30-hr. Bill was ordered favorably reported to the Senate Judiciary Committee by a special sub-committee late yesterday. No announcement of the sub-committee's action was made, but authoritative sources revealed that the measure was endorsed and it will be considered next Monday before the full committee. Senator Austin, Republican from Connecticut, has announced he will present a minority report.

The Connery 30-hr. Bill is somewhat different from the Black measure, but both provide a rigid 30-hr. week. Representative Connery is preparing to bring his bill up before the Committee on Labor for reporting to the House.

Despite industry's contention that passage of either of these bills would mean more rather than less unemployment, supporters of the measures, urged on by the American Federation of Labor, are pushing enactment of the legislation vigorously. Many believe that the legislation will be passed by both branches of Congress with opponents confident that the President will veto it.

Coming on top of these developments, Senator Wagner today re-introduced his Labor Disputes Bill. The Bill provides for majority representation, prohibits financing of labor organizations by employers and in general is patterned after the railway labor law.

Report New Franklin Car in $1000 Class

Plans for the introduction of a new air-cooled Franklin car to sell in the $1,000 class have been announced by J. E. Williams, president of Franklin Motors, Inc., according to recent reports. Some delay, it is reported, has been experienced in completing the financial details of the new company following acquisition of the assets of the H. H. Franklin Co.

Bigness Through Skill Economically Justified

During his interview this week with the press regarding the Administration's recommendation for continuation of the National Industrial Recovery Act, Donald Richberg, National Emergency Committee director, was asked about so-called monopolistic practices as related to the automotive industry. His attention called to the Henderson report which spoke of the position of the "big three" in the industry, Mr. Richberg said there was no question about that tendency, but, he pointed out, it has nothing to do with codification. It is, he declared, a matter of efficiency. There has been a steady increase in wages and quality, he declared, and a decline in prices.

"Where large enterprise is built on efficiency it has economic justification," said Mr. Richberg. "There is no justification where it is built up by sweating labor."

Ford Rouge Plant Current Consumption at '29 Level

The electric current consumption at the Rouge plant of the Ford company is reported to be at an average of 61,000,000 kw.hr. per month, paralleling the 1929 consumption record, the peak year since the company's founding. Statistical records show that the amount of current required to build the present V-8 is two-thirds greater than that necessary for the heavy production of Model T's during 1924 and 1925.

Preble, Van Deventer Met Section Speakers

The "Met" section of the S.A.E. will stage a transportation and maintenance activity meeting in New York on March 11. T. L. Preble, Tidewater, and F. M. Van Deventer, Cities Service, will be the speakers.

NSPA Moving Offices

On March 1 headquarters of the N.S.P.A. in Detroit will be moved from the Eaton Tower location to larger quarters at 1420 United Artists Building.

The entire working force of your plant may be caught in the grip of Oil Dermatitis. Carried from worker to worker by cutting oils and cutting compounds infected during use, this serious skin disease spreads rapidly . . . crippling production . . . lowering plant efficiency. It costs owners millions of dollars each year.

You can protect your shop family from Oil Dermatitis by sterilizing cutting oils and compounds with Derma-San Disinfectant. It is 15 times more powerful than carbolic acid, but much safer to use. Just add 1 pint of Derma-San to 35 gallons of lubricant, and kill dangerous pus-forming germs *before* they reach your workers' hands.

DERMA-SAN IS EXCELLENT FOR ALL GENERAL PLANT SANITATION

Plan to Modify Compliance Certificate Ruling Will Lift U. S. Ban on Ford Cars

Overtures of peace are being made to the Ford Motor Co. by government officials so that government departments may purchase Ford cars and trucks despite the fact that the Ford company does not have a Blue Eagle. The efforts under way also would apply to other companies which have declined to sign the certificate of compliance as provided for by the executive order of March 14, 1934, which made such a certificate necessary in order to sell supplies to the government.

The move toward peace with Ford involves study of the executive compliance order so that it may be interpreted to permit purchase by the government department of Ford cars and trucks without actually requiring the company to sign a certificate of compliance. The company's present policy of complying with the code will be all that is necessary to open the doors to it for government business.

Already some important purchases of Ford trucks have been made, so that the pending ruling will be a confirmation of the new policy of government departments and a formal and official precedent for proceeding with additional purchases. It is reported the new ruling is in contemplation by reason of plans of the War Department to advertise soon for 2500 trucks. Recent purchases of Ford trucks were made by the Department of Agriculture, which bought 400 while the Interior Department purchased 25.

Because of the importance of the change in policy it is assumed that it was inspired by the President himself and found ready response at the hands of the NRA and other government units. The ruling being prepared is being studied in the office of the Controller General with the assistance of Frank Healy, chief of the government contracts division of NRA. The part, if any, taken by the Ford company, has not been made known.

The first relaxation in the attitude of the government toward the Ford company was announced by an NRA order of Jan. 16 which granted to government departments authority to buy repair and replacement parts for Ford automobiles and trucks now owned by the government without requiring submission of a certificate of compliance with the code from the manufacturer.

Proposed Mass. Law May Require Speed Governors

The Massachusetts Legislature is considering a law to put governors on all new cars, and possibly on some of the old ones. Morgan T. Ryan, former Motor Vehicle Registrar, was one of those who spoke in favor of it at a recent hearing in Boston. Frank A. Goodwin, his successor, spoke against it. There may be compromise legislation allowing the Registrar to require owners who continue to do too much speeding and figure in accidents to place governors on their cars at the direction of the Registrar.

Evans Makes New World Record With Diesel Job

Dave Evans driving his Hemphill Diesel created a new world's record of 125.069 m.p.h. for the straight away mile at Daytona Beach, Fla., on Friday, Feb. 15. Evans' racer was powered with a Waukesha comet head Diesel engine, 5 x 5½, 6 cylinder. The previous mark was 120.33 m.p.h. established by George Eyston, English driver, on Montlhery Speedway last year.

Aircraft Yearbook Ready

The Aeronautical Chamber of Commerce of America, 30 Rockefeller Plaza, New York, will shortly issue two annuals, viz., the Aircraft Yearbook for 1935, which will be the seventeenth edition of this annual, and the Junior Aircraft Yearbook for 1935, which will be a second edition. The first volume is offered at $3.50, and the second at $1.50 per copy. The Aeronautical yearbook covers the activities of the American aircraft industry during the past year, giving statistics, photographs of new planes, an aeronautical directory, etc. The Junior Aircraft Yearbook is intended for model builders and young persons interested in aviation in a general way.

Bendix Corp. Acquires Zenith-Detroit Corp.

The Bendix Aviation Corp. has acquired the Zenith-Detroit Corp., according to Vincent Bendix. Hereafter the corporation will be known as the Zenith Carburetor Company, Mr. Bendix said. The operation of the Zenith Carburetor Company will be continued as heretofore in the Detroit plant of Zenith.

The executive staff of Zenith company will continue to be headed by Victor Heftler, who has headed Zenith since its organization. Mr. Heftler will be assisted by B. W. Westcott, vice-president and assistant general manager. The two companies, Zenith and Bendix-Stromberg, will continue to function as they have in the past, that is, separately, but will be in thorough cooperation. Zenith will take over the distribution of Bendix-Stromberg products in Europe.

Postpone P-A Hearing

A hearing on the proposed reorganization of the Pierce-Arrow Motor Co. was postponed this week until Monday, Feb. 25, by consent of Federal Judge Harlan W. Rippey, sitting in the United States District Court at Buffalo. The hearing will be held before Judge John Knight, if he has returned from a mid-winter vacation, otherwise Judge Rippey will preside.

Dodge Appoints Newbold

E. E. Newbold has been appointed regional truck manager in the New York region for Dodge Brothers Corp., according to Frank J. Timmens, Dodge New York regional manager. Mr. Newbold will work principally with dealers in developing the commercial car and truck markets.

Close Citroen Offices

American offices of Citroen, located at 968 National Bank Bldg., Detroit, are being discontinued, according to E. R. Frederick, who has been the American manager of Citroen since offices were established here in 1924.

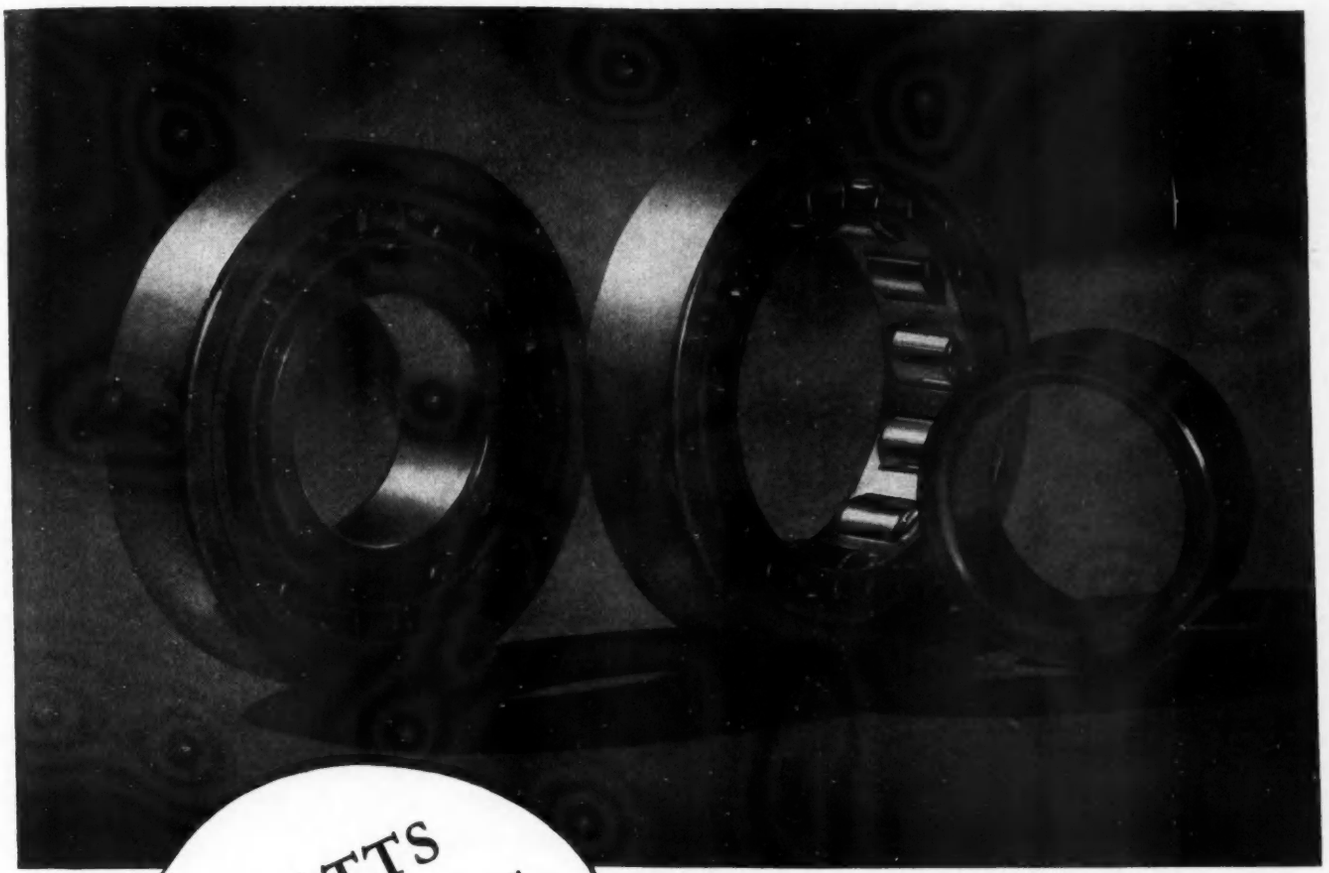
Mankato, Minn., Automobile Show Mar. 16-23
Machine Tool Exposition—Cleveland Sept. 10-21

CONVENTIONS AND MEETINGS

5th Annual Automotive Maintenance Meeting, Philadelphia ..... March 5-8
U. S. Chamber of Commerce Annual Meeting, Washington, D. C. Apr. 29-May 2
Lafayette, Ind. (Purdue University), Automotive Service Conference, Mar. 21-22
S.A.E. Summer Meeting—White Sulphur Springs, Va. ..... June 16-20
American Society for Testing Metals, Detroit ..... June 24-28



Hyatt HY-LOAD Solid Roller Radial Bearings shown complete with inner race and with inner race removed.

HYATTS ARE RIGHT *from the* START

Throughout the many years Hyatt Roller Bearings have been serving and saving, three outstanding reasons we like to believe are responsible for their widespread use. Continuous development of correct design, quality manufacture and sound application engineering. In product design, product manufacture and product application Hyatt factory and field forces are diligently striving to keep Hyatt Roller Bearings not only abreast of demands but as far out in front as possible.

Thus with Hyatt Roller Bearings right from the start—designed right, built right, and applied right—you have the answer to dependable performance wherever these better bearings are used. Hyatt Roller Bearing Company, Newark, Detroit, Chicago, Pittsburgh, Oakland.
